LIST

of

VERTEBRATED ANIMALS

LIVING IN

THE GARDENS

OF THE

ZOOLOGICAL SOCIETY

OF LONDON.

1866.

PRINTED FOR THE SOCIETY,
AND SOLD AT THEIR HOUSE IN HANOVER SQUARE.

LONDON:
MESSRS. LONGMANS, GREEN, READER, AND DYER,
PATERNOSTER ROW.
PREFACE TO THE FIRST EDITION.

This List, which has been drawn up, under my superintendence, by Mr. Louis Fraser, contained, as originally prepared, only the Vertebrated animals living in the Gardens on the 31st of December last, on which day it has been the practice for some years to take an accurate census of the Society's stock. The Council having determined to print it, for the use of the Fellows and other persons who take an interest in the Collection, I have carefully revised the whole, and endeavoured to make it as complete as possible by adding the species received since the beginning of the year. A living collection being liable to perpetual change, it cannot, of course, be expected that a list of this sort can be absolutely correct at any given moment; but I believe that the errors and omissions, as it at present stands, are not very numerous.

It will be observed that the Society's Collection, which is supposed to contain the most extensive series of living animals in existence, embraces about 1450 specimens, illustrating 188 species of Mammals, 409 of Birds, 62 of Reptiles, and 23 of Fishes—altogether 682 species of Vertebrates. There is, besides these, a large series of Invertebrated animals of different classes, kept in the House devoted to Aquaria, which varies much in composition and amount. In the "Scientific Index" to the List of Animals in the Society's Gardens, published in 1844 (which is, I believe, the last classified list issued), the number of species exhibited is given as 335—
namely 134 Mammals, 197 Birds, 3 Reptiles, and 1 Fish. This shows that we have made considerable progress since that period.

I may add that I am solely responsible for the arrangement and scientific nomenclature of this list and for the correct determination of the species. The difficulty, I may almost say the impossibility, in many cases, of ascertaining the specific names of living animals with perfect accuracy, is too well known to render apologies necessary in several cases where I may have failed in effecting this object.

PHILIP LUTLEY SCLATER,

Secretary to the Zoological Society of London.

11 Hanover Square,
June 2nd, 1862.
PREFACE TO THE SECOND EDITION.

The first edition of this Catalogue having been found of much use for reference, both by those who resort to the Collection for scientific purposes, and by the Society's numerous correspondents in foreign parts, the Council have authorized the preparation by Mr. Fraser, under my superintendence, of the present new edition, which gives the names of such animals as were living in the Gardens on the 1st of January last, together with those of the species that have been received since that period up to the end of May last.

The present Catalogue includes the names of 821 species of Vertebrates—namely, 229 Mammals, 468 Birds, 84 Reptiles, and 40 Fishes—illustrated by 2080 specimens in all. This, it will be observed, is a considerable increase over the number given in the former Catalogue, in which only 682 species of Vertebrates were enumerated.

P. L. S.

11 Hanover Square,
August 1st, 1863.
PREFACE TO THE THIRD EDITION.

In the present edition of this List, which has been prepared, as in the case of the former editions, under my superintendence, by Mr. Louis Fraser, it has been thought the simplest plan to insert the names of all the species that have been exhibited in the Society’s Collection during the past year.

This will partly account for the increase of the numbers over those given in the last edition of the catalogue—though not altogether, as the fact is that the Society’s Collection of living animals is being augmented year by year. That this is the case will be easily seen by the subjoined table, in which the numbers of specimens of the three highest classes of Vertebrates in the Society’s Gardens on the first of January during the past ten years are given:

If the numbers were taken in the middle of the summer, instead of on January 1st of each year, they would be larger, as during the autumn the duplicates, consisting principally of animals bred in the Society’s Gardens during the year, are disposed of as far as possible.

PHILIP LUTLEY SCLATER,

Secretary to the Zoological Society of London.

11 Hanover Square,
Jan. 1st, 1865.
The fourth edition of this List has been prepared on exactly the same principles as the third edition.

The names of all the Vertebrated animals added to the Society's collection during the years 1865 and 1866 have been inserted in their proper places; and the list in its present state may be considered to contain a complete record of all the species of Vertebrates that have been exhibited alive in the Society's Gardens in the years 1863, 1864, 1865, and 1866.

The total number of these is as follows:—

The following are the most recently published Parts of the "Transactions":—

Now ready, price £12: 12s., in one volume, bound in half-morocco, containing 50 coloured plates.

The first Series of

ZOLOGICAL SKETCHES

BY JOSEPH WOLF.

MADE FOR

THE ZOOLOGICAL SOCIETY OF LONDON,
FROM ANIMALS IN THEIR VIVARIUM.

EDITED, WITH NOTES,

BY PHILIP LUTLEY SCLATER, M.A., Ph.D., F.R.S.,
SECRETARY TO THE SOCIETY.

The series of Drawings, of which a selection of Fifty is given in the present Volume, was undertaken with the object of preserving a faithful record of the living characters of the most rare and interesting Animals in the Vivarium of the Zoological Society of London.

The present extent of the Society's Collection, and the prospects of increase, derived from the energetic support which it continues to receive from so many sources, afford unequalled means of making these Zoological Portraits both various and instructive. In selecting the subjects, particular regard is paid to those species which exhibit aptitude for acclimatization, either as objects of economic value, or simply as additions to the Exotic Animals which are now so frequently seen in the parks and on the ornamental waters of Europe.

The Drawings have been executed in Water Colours, after most careful study, by Mr. Wolf, who may be fairly said to stand alone in minute knowledge of the habits and forms of Mammalia as well as of Birds; and the Lithographic copies, partly printed in colour and then finished by hand, are in such exact fac-simile as to be scarcely distinguishable from the originals. The Letterpress, prepared by the Editor, embraces all particulars of interest relating to the general history, habits, distribution, and use of the Animals illustrated in the Plates.

A second series of the same work is now being issued, and will shortly be completed. Six double parts, price 42s. each, of the new series are now ready.

A GUIDE TO THE GARDENS

OF THE

ZOOLOGICAL SOCIETY OF LONDON.

Twentieth Edition, corrected according to the present Arrangement of the Gardens,

BY PHILIP LUTLEY SCLATER, M.A., Ph.D., F.R.S.,
SECRETARY TO THE SOCIETY.

London: Bradbury and Evans, 11, Bouverie Street; and at the Society's Gardens in the Regent's Park.
